

The Jefferson Parish Coroner's has installed a new state of the art digital X-ray scanner in September 2017. The Lodox scanner is a time-saving, full-body digital X-ray imaging device. It is the only system in the world that provides an excellent quality X-ray image up to 6 feet in length in just 13 seconds. Lodox is also safer, emitting up to 10 times less harmful dose than regular X-ray systems.

In forensic pathology (medico-legal) applications, the Statscan provides an easy-to-use, fast method for assessing the entire subject's body in multiple planes to assist with pathology location, particularly useful in the case of gun shot victims. The single sweep eliminates the need to move the subject to obtain all necessary views, making it more efficient and safer for staff.
